- AWS Basics
- AI Tools
- Github

Projects

Business Manager

Cross-platform mobile application built with React Native and Firebase to support business management workflows. Provide all the features required for a businessman including inventory management, sales, performance dashboard, billing, barcode scanning and upi payments.
github.com/areebmohd/BusinessManager

MyService

A full-stack service listing and booking platform built using the MERN stack. Help users to search for service providers with filters and allow service providers to showcase their service information through profiles. Use AWS storage for storing photos and videos.
my-service-frontend.onrender.com

FoodDel

A full-stack food delivery web application built using the MERN stack, designed to let users browse restaurant menu, place food orders through online payments with Razorpay, similar to modern food ordering platforms. Admin panel included to manage orders, users and food items on site.
