SUMMARY

Final-year B.Tech Computer Science student with 2+ years of experience shipping production React, React Native, and Next.js applications end-to-end — from Supabase/Firebase-backed architecture through to Google Play Store deployment. Built a 3-app delivery platform (customer/business, rider, and admin) with real-time GPS tracking, live order management, and automated multi-party payouts, alongside client and internship work integrating CRM systems, WhatsApp automation, and payment gateways.

SKILLS

Languages	JavaScript, TypeScript, Python
Frontend & Mobile	React, Next.js, React Native (CLI), Tailwind CSS, HTML/CSS
Backend	Node.js, Express, REST APIs, Socket.io
Databases & Cloud	Supabase (PostgreSQL, Auth, Realtime, Storage), Firebase (Auth, Firestore, FCM), MongoDB
Tools & Integrations	Git/GitHub, Razorpay/RazorpayX, Mappls (MapmyIndia) Maps SDK, Puppeteer, Canva, VS Code

EXPERIENCE

Software Development Intern — ArchScale Guild June 2026

- Contributed to a full-stack SaaS platform for architecture and interior design firms, building CRM modules for lead tracking and client pipeline management.
- Implemented WhatsApp-based automation for drip marketing, enabling multi-step automated follow-up sequences to nurture leads without manual outreach.
- Worked across frontend and backend to sync lead and client data in real time, giving firm owners a single dashboard view of their pipeline.

Founder & Developer — Zoro (Hyperlocal Delivery Platform) 2026 – Present

- [zorodelivery.vercel.app](#)
- Architected a 3-app delivery ecosystem — customer/business app, rider app, and admin panel — using React Native (TypeScript) and React, backed by Supabase (PostgreSQL, Auth, Realtime, Storage).
 - Built the customer/business app across 28 screens — Mappls-powered store discovery, multi-store cart, map-based address selection, favourites, and order history for customers; inventory, order control, offers, and payouts for stores.
 - Implemented real-time rider location tracking that streams live GPS coordinates to Supabase (10m/10s watch interval) for live order tracking on Mappls maps, with QR-verified pickup/drop-off and Firebase Cloud Messaging + Notifee push notifications.
 - Developed the admin panel (React 19, TypeScript, Vite, Framer Motion) across 11 modules — orders, deliveries, riders, stores, products, payments, and real-time notifications — secured with Supabase Row-Level Security and JWT auth.
 - Designing an automated RazorpayX split-payment system to distribute revenue across stores and riders on each order; published to the Google Play Store with 7+ stores and 160+ live products onboarded in Gurugram Sector 51.

PROJECTS

BizManager bizmanagersite.vercel.app

React Native (CLI) · Firebase · Razorpay · Vision Camera

- Cross-platform inventory, sales, dashboard, and settings app for small businesses to manage day-to-day operations from their phone.
- Built barcode-based inventory lookup with React Native Vision Camera, UPI QR code generation, and one-tap WhatsApp invoice sharing via automated PDF generation.
- Synced inventory, sales, and dashboard analytics in real time with Firebase Auth (Google Sign-In) and Firestore, with performance charts and in-app Razorpay payments.
- Implemented a freemium subscription model (7-day free trial, Firestore-tracked plan status) and a self-hosted in-app update checker to notify users of new releases.

WebCRM github.com/areebmohd/AshuWebsitesManager

Next.js · Express · MongoDB · Puppeteer · Socket.io

- Built an internal CRM and lead-generation platform to manage the client lifecycle for Ashu Websites — from lead discovery to site delivery.
- Built a Puppeteer-driven Google Maps scraper that finds local businesses without an existing website and extracts verified contact numbers, classified automatically by category, with live leads streamed to the dashboard via Socket.io.
- Added a mall/market discovery mode to surface premium commercial locations city-wide, plus a MongoDB-backed sync layer (Express API) handling atomic bulk read/write across leads, outreach history, and website templates.
- Powers delivery of client-facing storefronts with online ordering, payments, and contact integration — mobile-responsive and deployed on Vercel.

EDUCATION

B.Tech in Computer Science Engineering — Gurugram University, Gurugram 2023 – 2027 | CGPA: 8.34

Class XII (CBSE) — Riverdale International School 2022 | 92%

Class X (CBSE) — Riverdale International School 2020 | 96%
